

Angle

Following are some common angles for taking pictures:

1. birds-eye view
2. bugs-eye view
3. eye-level
4. close-up
5. full-view
6. profile/side view

You must take as many as possible *unique* angles of a:

1. flower or ground plant
2. classmate
3. child (prek-2 is at recess until 10:45, 3-4 is at lunch at 11)
4. vehicle
5. tree
6. the school
7. inanimate object
8. your choice :)

Import the photos into iPhoto, put them in a folder titled Angle, and title them by these examples:

- *flower bird, flower bug, flower close, flower full* (eye-level and profile would be duplicates of other views)
- *Joe bird, Joe bug, Joe eye, Joe close, Joe full, Joe profile*

You should have an album of around 40 good images.

Print a contact sheet with ALL the angles of 4 different subjects. You should have 20-24 pictures. Print this as a two-sided 3 column contact sheet with titles that describe the image and angle.

You will be working outside or in the elementary wing to finish this assignment. Work in groups of no more than 2-3 and respect other classrooms!

20 pts total

(1 per angle and 4-6 angles per subject, extra points possible)
